

FISCHBEIN-SAXON®

Saxon SB1000™

Band Heat Sealer

More flexibility. More options.

More uptime. More savings.

The new-generation Fischbein-Saxon® SB1000 Band Heat Sealer with its sleek, durable, stainless steel finish is compatible with the hygienic requirements of the food, medical and chemical sectors. The high-efficiency band-sealing module and enhanced cooling capabilities produce reliable, esthetic seals on bags or pouches made from polyethylene, poly laminates, co-extrusions, and shrink films.

Suitable for operation in all kinds of environments, the SB1000 features user-friendly controls and a variable speed drive (VSD). The height-adjustable pedestal allows the operator to make fast, efficient product changeovers, and the open architectural design simplifies maintenance and reduces downtime. Cool-down mode ensures a safe, automatic shutdown of the unit.

The standard SB1000 creates 12 millimeter-wide seals. Other models include a full wash-down (NEMA 4/IP66) version and a conveyor-integrated unit. Available options include additional PID temperature controllers, bag-top trimmers and cleaner, and ink and embossing coders.

On the packaging line, nothing is more important than a quality bag seal, and the SB1000 is a smart solution.

Equipment Specifications

Operating direction

Standard: right to left
Requested: left to right

Dimensions

Height.....highest 65", lowest 45.5"
Width.....40.5"
Depth28"
Shipping weight.....275 lb

Sealing height

Adjustable pedestal height 34" to 53"

Thickness of film

Total maximum thickness 10 mil (250 microns)

Electrical

Voltages: 115 V or 230 V, 1 or 3 phase 50/60 Hz
Ratings: Standard model IP66
Full wash-down version NEMA 4

Speed ranges with VFD

5-20 fpm
17-41 fpm
36-89 fpm

Bag requirements

Recommended minimum free top 3.5"
Bag header clearance maximum 4.75"
